ARTEMIS — MAINTENANCE GOVERNANCE PLATFORM

Keeping maintenance controlled, visible, and easy to evidence

Why It Matters

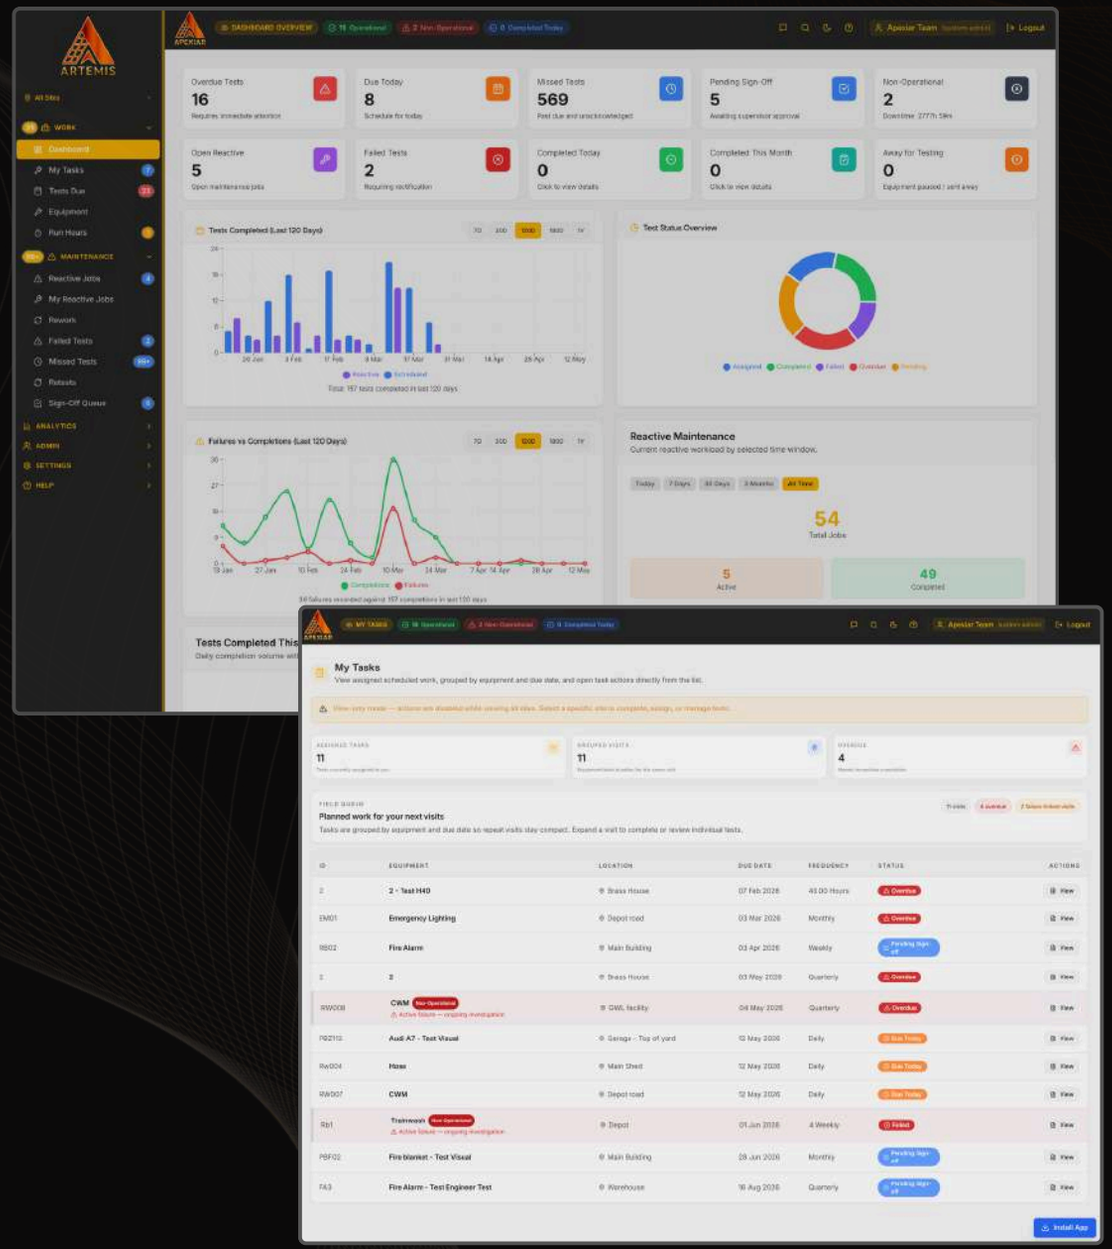

- Reduces compliance and audit risk through complete, defensible records
- Prevents missed maintenance with automated scheduling and alerts
- Cuts administrative overhead and manual coordination
- Scales cleanly from small estates to enterprise portfolios

How ARTEMIS Works

- Client-defined test requirements drive all maintenance activity
- Scheduled and reactive work managed through a single workflow
- Guided digital checklists ensure consistent, complete execution
- Controlled sign-off and failure tracking support quality control

What ARTEMIS Delivers

- A single auditable system of record for asset maintenance and compliance
- Digitised testing and controlled sign-off, replacing paper and spreadsheets
- Real-time visibility of asset status, failures, and overdue work
- Clear accountability, with every action traceable to a user

ARTEMIS — OPERATIONAL MAINTENANCE CONTROL

One platform for maintenance, compliance, and asset assurance

ARTEMIS

Overview

ARTEMIS brings maintenance planning, testing, compliance records, and operational oversight together in one connected platform.

It helps teams move away from paper records, spreadsheets, and disconnected tools by giving users a clearer view of asset activity and outstanding work.

Designed for regulated and safety-critical environments, ARTEMIS supports technicians, team leaders, managers, and clients with timely, structured maintenance information.

Core Functionality

What teams use to manage maintenance activity:

- Scheduled and reactive maintenance in one workflow
- Digital test cards, checklists, and electronic sign-off
- Real-time dashboards showing asset status and overdue work
- Tracked failures, rectification, and retest
- Inventory management incorporated in a planning work bench
- Role-based access for technicians, reviewers, and clients

Advanced Capabilities

Built for scale, control, and audit review:

- Client-defined test requirements
- Full record of timestamps, users, actions, and approvals
- Failure tracking from investigation through to closure
- Support for small estates through to larger portfolios
- API-ready foundation for future integrations

Without ARTEMIS: Maintenance records are fragmented, reactive, and difficult to defend

With ARTEMIS: Maintenance obligations are planned, completed, and evidenced through one controlled process

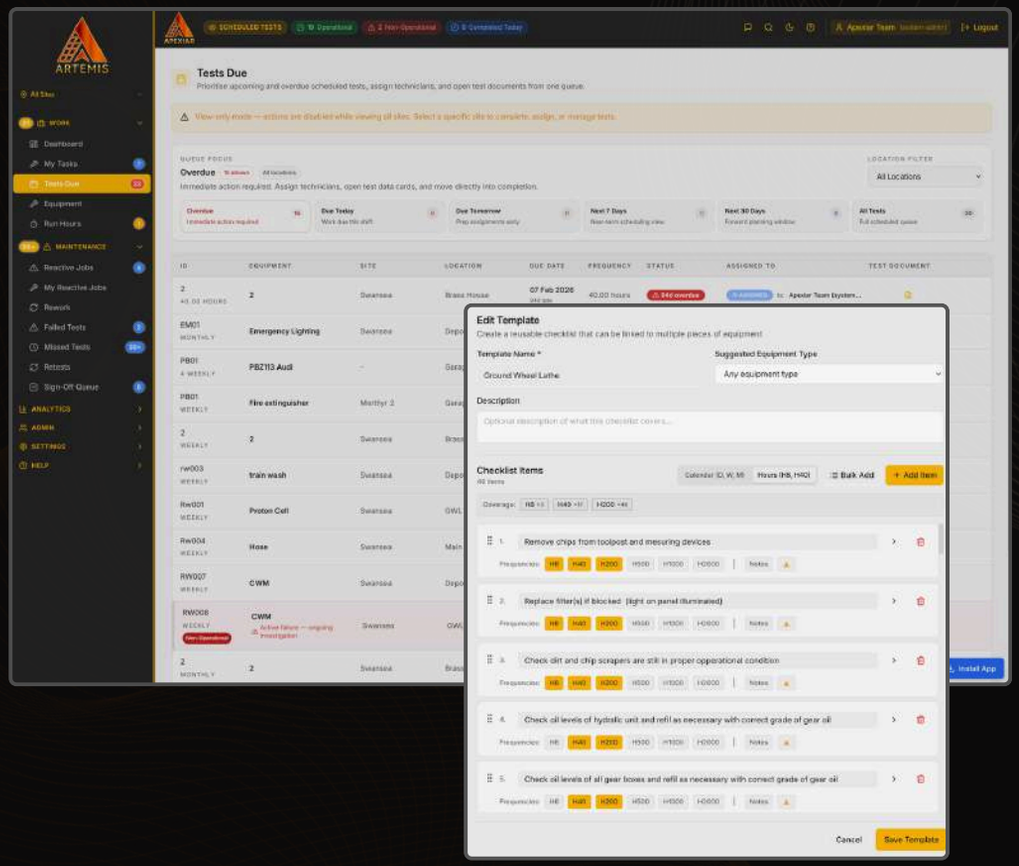

THE ARTEMIS OPERATIONAL WORKFLOW

Planning, execution, review, and assurance in one controlled process

Maintenance Control Cycle

ARTEMIS supports the full maintenance and compliance cycle, from planning and task allocation through to completion, review, rectification, and record keeping.

This gives teams a consistent way to manage maintenance obligations and keep work visible across the asset estate.

Real-Time Operational View

Dashboards show asset status, scheduled work, failures, overdue tests, and outstanding actions. Users can see what is due, what is at risk, and where follow-up is needed without relying on manual updates or separate trackers.

Controlled Execution and Sign-off

ARTEMIS guides technicians through structured digital test cards and checklists. Completed tasks move into a review process, helping teams check the work, confirm outcomes, and close records with the right level of control.

Failure Tracking & Rectification

ARTEMIS records failures at the point of testing and keeps follow-up action visible through rectification and retest. This helps teams see what has failed, what action is outstanding, and whether the issue has been properly resolved before the record is closed.

Ongoing Compliance and Assurance

ARTEMIS keeps a clear record of maintenance activity, approvals, failures, and outcomes. This helps organisations show what has been completed, what has been reviewed, and what still needs action.

PREVENTATIVE MAINTENANCE & FAILURE CONTROL

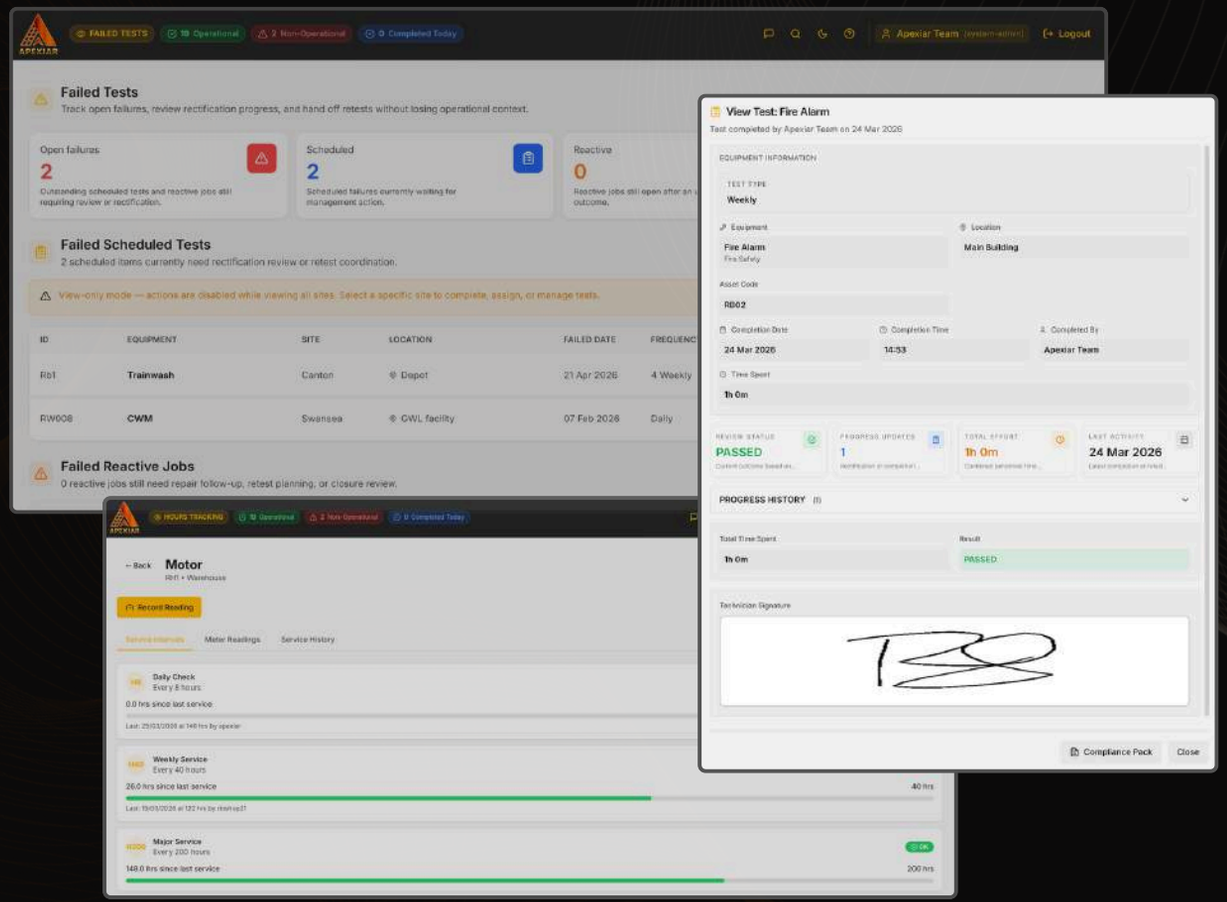

Helping teams act before maintenance issues become bigger problems

ARTEMIS

Preventative Maintenance

ARTEMIS supports planned maintenance by keeping testing and servicing on a controlled schedule.

Automated scheduling and clear ownership reduce the need for manual tracking and help teams act before work becomes overdue.

Failure Detection

Failures can be captured at the point of testing, inspection, or investigation. This gives teams a clear record of what failed, when it was found, and what action is needed next.

Rectification and Retest

ARTEMIS tracks failures through rectification, retest, and sign-off. This helps ensure issues are not just recorded, but followed through until they are resolved.

Maintenance Assurance

Recurring failures, unresolved issues, and overdue actions remain visible. This supports better decisions about asset condition, maintenance quality, and operational risk.

SCHEDULING, CHECKLISTS & AUDIT EVIDENCE

Keeping maintenance cycles controlled and records easy to review

ARTEMIS

Controlled Scheduling

ARTEMIS keeps scheduled maintenance aligned to its intended cycle, even when work is completed early or slightly late. This gives teams operational flexibility while preserving the compliance baseline.

Auto-Rollover and Overdue Control

Tests remain tied to their configured frequency, with overdue work surfaced for review and action. Teams can see where schedules are on track, where work is late, and where commentary or follow-up is required.

Digital Checklists

Client-defined checklists guide users through the required checks for each equipment type, task, and frequency. Required items can be completed, validated, and supported with notes or evidence before submission.

Signatures and Review

Electronic signatures and structured review create a clearer evidence trail for completed work. This helps teams show who completed the task, who reviewed it, and what evidence was captured.

Frequency	Interval	Overdue Window	Auto-Rollover Behaviour
Daily	Every day	0 days	Rolls over at midnight
Weekly	7 days	3 days	Advances to next week
4-Weekly	28 days	7 days	Advances to next cycle
Monthly	1 month	7 days	Advances to next month
Quarterly	3 months	14 days	Advances by 3 months
6-Monthly	6 months	21 days	Advances by 6 months
Annually	12 months	30 days	Advances by 12 months

Without ARTEMIS: Paper test cards are difficult to validate, retrieve and defend

With ARTEMIS: Completed work is checklist-led, signed and audit-ready

ASSURANCE, SECURITY & ORGANISATIONAL VALUE

Clearer control over maintenance, compliance, and asset records

ARTEMIS

Operational Value

ARTEMIS improves day-to-day control of scheduled and reactive maintenance across the asset estate. Teams can see missed work, overdue tasks, failures, and outstanding actions more clearly.

- Fewer missed or overdue maintenance tasks
- Better visibility of failures and follow-up work
- More consistent execution across teams and sites

Compliance and Asset Assurance

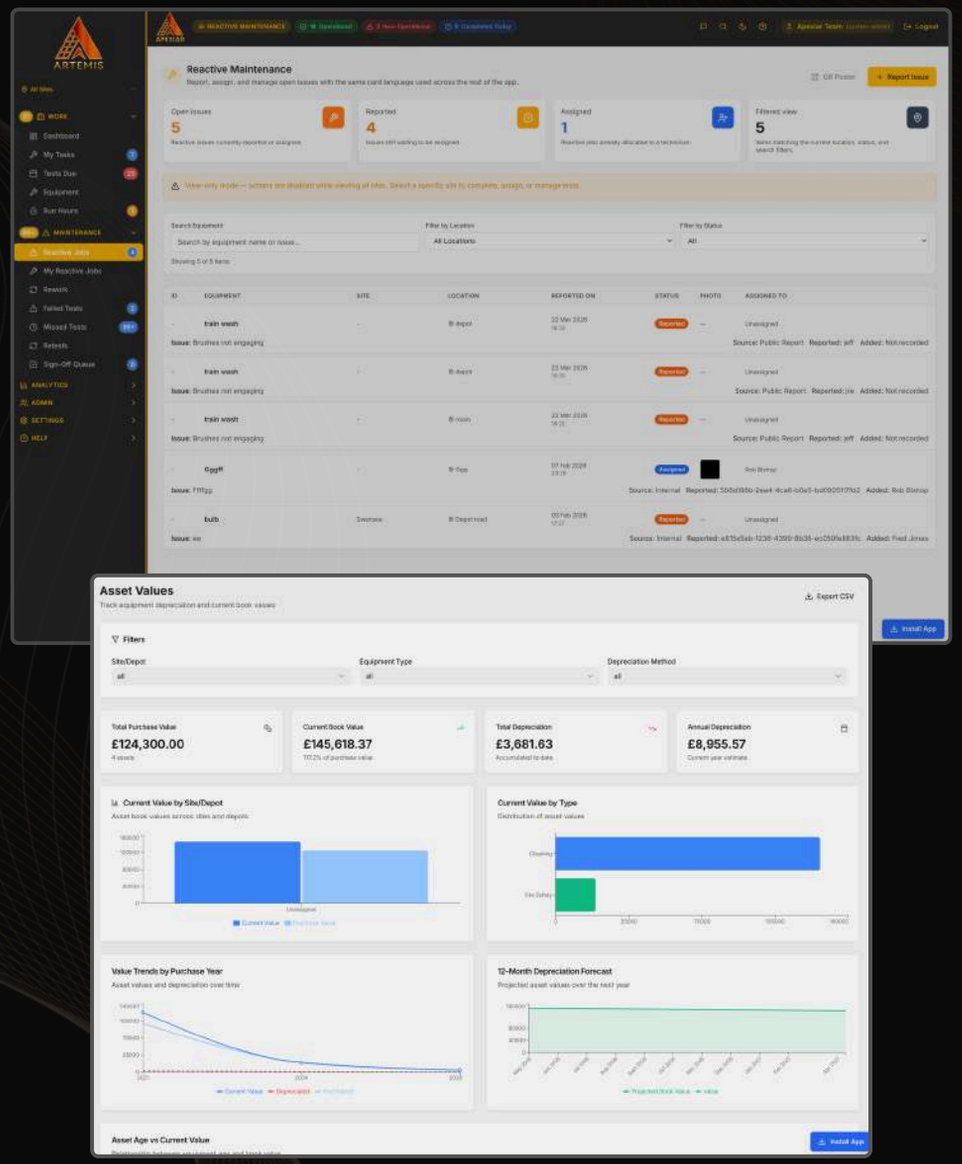

ARTEMIS strengthens confidence that maintenance obligations are completed, reviewed, and evidenced. Records are easier to find, easier to review, and easier to explain during audits or investigations.

- Clear record of actions and approvals
- Structured rectification and retest process
- Evidence available for internal and external review

Security and Access Control

Access to maintenance records, approvals, and administrative functions is controlled through role-based permissions. This helps keep records separated, traceable, and available to the right users.

- Role-based access control
- Secure separation of users, sites, and records
- Reporting and export for assurance activity

APEXIAR

ARCHITECTS OF INTELLIGENT INFRASTRUCTURE

ARTEMIS is designed for organisations operating in complex, safety-critical and regulated environments where maintenance discipline, compliance assurance, and operational accountability matter.

By combining preventative planning, controlled execution, digital checklists, electronic sign-off, and clear maintenance records, ARTEMIS helps reduce missed work, manual administration, and reactive intervention.

This gives teams greater confidence that critical assets are being maintained, reviewed, and evidenced through one controlled operational platform.

Built to scale.

Designed for governance.

Focused on assurance — with measurable efficiency.
